WHAT IS CANCER 1: RESOURCE SHEET 2 - MEMORY ALLEY ACTIVITY

1. The students will have already written a selection of questions with the answers on the back.

2. Choose two students and give them a selection of the questions.

3. Line the rest of the students up with half on one side of the room and half on the other, so that they make an ‘alley’.

4. The students in the middle should pick a question, walk down the alley and choose a student to whom they will ask the question. The alley student will try to answer the question, but if they struggle then the answer is on the question sheet and the questioner can help them to answer it.

5. The second student will then choose a question and alley student to ask a question of them.

6. The two students will then join the end of the alley and the top two take the selection of questions and repeat the questioning.

7. The process can be repeated until all students have asked a question, had the chance to answer or that all of the questions have been used.

8. This activity should consolidate learning and allow students to identify new information.
